

## **All My Dreams On VHS: manual text**

### **Front cover**

AMBISONICS

DREAMSPOON™ HXZZ2100  
VHS COMPATIBLE

Type 21  
Build 2  
Firmware version 2.2

(EUROPE AND MIDDLE EAST)

### **Some random pages inside**

Important: do not remove connections from inputs 3 or 4 at any time whilst Dreamspoon™ HXZZ2100 is in operation. To do so may cause irreversible side effects in user. See section 9.7 for further details in precautions against psychosis and 'Fernando's syndrome.'

Diagram 2.6 shows typical configuration with a standard filter comb and an RGB generator leading to domestic VCR. To ensure proper sync functions with most available domestic filter combs, use the dropdown preference menus as described in chapter 7.

Diagram 3.1 shows an ideal alignment of the Scooper Crown™ on an average human skull. Receptors A through D are positioned in the region of parietal lobes, receptors H through K upon the frontal lobes. Receptor E through G are centred along the central fuse of the occipital lobe, and the separate TIMER RECEPTION PLUG is to be attached to the section of the temporal lobe most likely to scan in the individual user (SEE DIAGRAMS IN SECTION 33 FOR MORE INFORMATION ON LOCATING YOUR OWN INDIVIDUAL TEMPORAL HOTSPOT.)

.....

N.b. The Dreamspoon™ HXZZ2100 is a NON-VOLATIVE subconscious image extraction system, with a CROSS LATERAL MATRIX. As such it should not be combined with any LATERAL MATRIX S.I.E.S. device. Any such connection would risk a TOTAL NEURONE-BASED SLAM (see subsection 43.11.)

Use of aluminium and copper-based AMBISONIC GOLD connecting cables will produce the optimum clean, sharp image, leading to maximum enjoyment of your dreams.

IMPORTANT: DO NOT CONNECT the Dreamspoon™ HXZZ2100 to any non-regulated “neural-heavy” perception filter. These devices are ILLEGAL and Ambisonics Inc. accepts no responsibility for any left-brain explosion caused by such a combination of devices.

.....

To Ensure the Dreamspoon™ HXZZ2100 is calibrated for the correct depth of field:

- 1) Take the LINK PIPE 40 provided with the home installation pack.
- 2) If connecting the Dreamspoon™ HXZZ2100 for the first time, simply switch the Dreamspoon™ HXZZ2100 on and it will display a type 12 installation menu. If not connecting the Dreamspoon™ HXZZ2100 for the first time, (for instance, if installing within a different property) then hold the RECORD and STOP buttons down for 10 seconds whilst turning the MAINS POWER ON AT THE WALL.
- 3) On the type 12 installation menu, choose CALLIBRATE WITH PIPE.
- 4) When prompted, move around area you wish to cover, waving the PIPE. Make sure you cover all areas desired, eg lofts, garages, garret rooms, greenhouses or sheds.
- 5) The PIPE will beep if it registers an unacceptable extremity.
- 6) The PIPE will beep TWICE if it registers an unregistered or ancillary Dreamspoon™ HXZZ2100 device.
- 7) The PIPE will beep THREE TIMES if it detects a JENDRILL’S WHORL (see page 7.)

.....

*HOW YOUR Dreamspoon™ HXZZ2100 DETECTS THE BEGINNING AND END OF DREAMS:*

There are 2 ways of initialising a recording using your Dreamspoon™ HXZZ2100.

OPTION A:

R.E.M. TRIP (Choose REM TRIP on the REC OPTION page of PREFERENCES menu)

R.E.M. trip uses critical fluctuations in rapid eye movement to trigger a recording function on your Dreamspoon™ HXZZ2100. For this option, you will need to use the eyelid sensor taps provided with your home installation pack (see section 3 for instructions on how to slide the taps beneath your eyelids painlessly.)

OPTION B:  
ELECTRICAL ACTIVATION – also known as GANGLION SLIDE TRIGGER  
(Choose ELEC ACTIV on the REC OPTION page of PREFERENCES menu)

Electrical activation senses what neuro-leisure technicians call a ‘wrapping’ of the temporal lobe. If the temporal lobe ‘wraps’ at any point during the 4 internationally recognised stages of sleep (see Appendix 2) then the ‘blind silicone’ implant of the TIMER RECEPTION PLUG sends a minute electrical pulse to the EXT LINK of the Dreamspoon™ HXZZ2100.

WARNING: use of the ELEC ACTIV method is not recommended when running the Dreamspoon™ HXZZ2100 on BATTERY OPTION. In certain isolated circumstances, it can lead to a FEEDBACK CHARGE which in extreme circumstances can result in BRAINFUDGE.

## TROUBLESHOOTING

*Problem:* Dreams are fuzzy, indistinct and / or the colours are bleeding.

*Solution:* Ambisonics Inc. can accept no responsibility for the aesthetic qualities of your own personal unconscious images. We suggest boosting the image profile by purchasing a HEADSPACE plug-in for your Dreamspoon™ HXZZ2100's oscillator bank. Alternatively, try tuning the Dreamspoon™ HXZZ2100 to your own subconscious by falling asleep\* and having a friend scan your output. This is best done using the MANUAL SCAN option on the QUALITIES tab of the preference menu (see page 13.)

\*n.b. do not attempt this whilst driving or operating heavy machinery.

*Problem:* Dreamspoon™ HXZZ2100 occasionally makes a strange noise whilst in REC STANDBY mode (the noise is like a low growling, or a grating metallic sound.)

*Solution:* This is quite common in S.I.E.S technology, and nothing to be concerned about. It is simply a residual pump.

*Problem:* Dreams often do not record, or only record in part, sometimes ending before they reach a conclusion.

*Solution:* Ambisonics Inc. cannot be held responsible for the narrative or non-narrative nature of your dreams, and any inexplicable or unexpected developments within them. Have you tried calibrating the EXT LINK sensitivity (see page 3) or cutting down on your intake of dairy products?

*Problem:* Dreamspoon™ HXZZ2100 has recorded something abstract or vague (common phenomena include: a single wash of colour; a large, static numeral; a continuous distorted monotone beeping.)

*Solution:* Ambisonics Inc. can accept no responsibility for the aesthetic qualities of your own personal unconscious. If your dreams are unsatisfying or dull, you might like to increase your chances of encountering interesting stimuli by leading a different lifestyle whilst awake, either a) temporarily or b) permanently.

*Problem:* In some of my more pleasant dreams, the edges of the images recorded by the Dreamspoon™ HXZZ2100 look as though they have been mauled by a terrible beast, or chewed at and scratched away by a large cat.

*Solution:* This is a very common problem amongst users and we are working on potential fixes for future firmware releases. Please check the Ambisonics website regularly.

*Problem:* The Dreamspoon™ HXZZ2100 is on fire.

*Solution:* Contact the emergency services as soon as possible.

.....

### *HOW YOUR Dreamspoon™ HXZZ2100 CAPTURES SUBCONCIOUS IMAGES AS EASILY VIEWABLE RECORDINGS (PAL / NTSC)*

- Neurons fire in the individual synapses of the brain, at incredible speed. The Dreamspoon™ HXZZ2100 has a bio-electrical speedscan multi-view interface connected to a 24-bit graphics analyser, which can process integral colourfield profile images across specific vectors of approximately 17 million megabytes to every pass.
- These are then fed through six dual-action YERGIS Ball-Chip™ motors, each one forward-generating and fast-backing a different component element of the image (eg. size, speed, height, age) in order to animate the neural 'flash' it in a way the conscious eye is more likely to recognise.
- WHAT DOES THIS MEAN? Well, as an example, imagine you dream of a polar bear: without the Dreamspoon™ HXZZ2100's processors, the bear would actually appear to the conscious eye inaccurately: as, say, a tankard, or a missing floorboard. The same applies to sounds and actions: a bird playing a grey banjo seems like an entire weekend hanging upside-down in the centre of a deserted restaurant owned by David Bowie – you can see the obvious connections, but the sense is imprecise.
- At Ambisonic HQ, neuro-leisure technicians and researchers have spent years mapping the autolinguistic switches that immediate memory imposes upon the dream image, changing it fundamentally. The Dreamspoon™ HXZZ2100 now has a conversion grid of over 780 billion billion cross-

references: including feelings, words, places, and famous historical persons such as Hitler and King Henry VIII.

- Once processed, images are recorded to VHS in the same manner as you would a television programme, or home video.
- If all of this seems confusing and technical, imagine a life without the Dreamspoon™ HXZZ2100: you'd have to remember dreams all on your own, and imagine how much effort that would take!!!

.....

*A FEW NOTES ON THE WIRELESS CAPABILITIES OF YOUR Dreamspoon™ HXZZ2100 DEVICE.*

Once you have calibrated the depth of field of your domestic Dreamspoon™ HXZZ2100 using the methods detailed in the installation guide, there are various options for how you secure its wireless capability.

Please note that the wireless capability of your Dreamspoon™ HXZZ2100 is entirely the responsibility of the owner, and Ambisonics Inc. cannot be held liable in any way for extended transmission of your subconscious, unconscious, non-conscious or extra-conscious thoughts and images, and any subsequent embarrassment or legal proceedings which may subsequently occur (including infringement of copyright.)

Here is a chart to help you judge what security settings you might use.

Desired reach	Filter method*	Suggested setting
Family	None	"Thermidor"
Family	Medium	"Puppy Dog"
General internet use	Medium	"Caligula"
Flats and apartments	None	"Boombastic"
Community / neighbourhood	Medium	"Serenity"
Oil Rigs / Prisons	High / High risk	"Syntax"
Student	None	"Armadillo"
Student	Low	"Distant Drums"
Student	Medium	"Excelsior"
Student	High risk	"Ferrari"
Faith organisation	Standard / medium	"Tamarind"

\*Using Ambisonic filter plug-ins, optional (not available in Republic of Ireland.)
